Tire Rack Tire Service Recommendations:

- Tire pressures should be set to vehicle placard specifications and checked monthly/before long trips.
- Vehicle alignment should be checked/reset when new tires are installed or any irregular wear is apparent.
- Rotate tires every 3,000 to 5,000 miles. Rotations early in the tire's life are most important to prevent
 irregular wear. Summer/all-season/winter tires should be rotated every time they are installed seasonally.
